

Regional Tourism Satellite Account

Fraser Coast 2013-14

In 2013-14, the tourism industry contributed an estimated \$690 million to the Fraser Coast regional economy (20% of gross regional product) and directly employed approximately 2,900 people (8.1% of regional employment).

Tourism Satellite Accounts (TSA) evaluates the tourism industry activity and performance within a national accounting framework. The regional TSA measures both the direct and indirect impacts of tourism on the economy and includes metrics such as Gross Value Added (GVA), Gross Regional Product (GRP) and employment. It also provides information about tourism consumption, output, taxation and the composition of the tourism industry and its interaction with other industries.

This Fraser Coast regional profile ranks the economic contribution of tourism to the region both in absolute level terms and as a contribution to the regional economy. These measures are directly comparable to State, National, and indeed, international Tourism Satellite Accounts.

Key aggregates

In 2013-14, the tourism activity in Fraser Coast generated:

Tourism output

- \$0.4 billion and \$1.0 billion in direct and indirect tourism output, and \$1.4 billion in total tourism output.

Gross Value Added (GVA)

- \$0.2 billion and \$0.4 billion in direct and indirect tourism GVA, and \$0.6 billion in total tourism GVA.

Gross Regional Product (GRP)

- \$0.2 billion and \$0.5 billion in direct and indirect tourism GRP and \$0.7 billion in total tourism GRP; and

Employment

- 2,900 jobs for people employed directly by the tourism industry, 4,100 indirect jobs and a total employment impact of 7,000 people.

Table 1.1 Key tourism aggregates (\$ million)

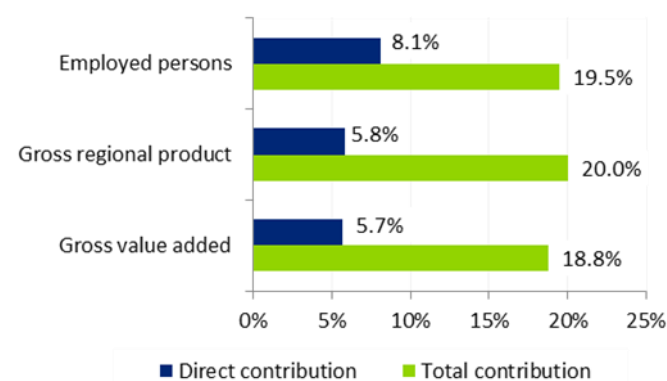

Visitor segment	Consumption	Output	GVA	GRP	Employed ('000)
Day-trippers	90	41	20	23	
Domestic overnight	370	254	128	138	
International	66	65	36	41	
Direct	526	361	184	201	2.9
Indirect		1,013	424	491	4.1
Total impact		1,373	608	692	7.0
Total economy			3,240	3,457	35.9

Economic importance of tourism in the region

The ratio of Fraser Coast's direct tourism contribution to the total regional economy aggregates provides a point of reference snapshot for the importance of tourism to the region. In 2013-14, it is estimated that tourism directly represented 5.8% of the total Fraser Coast economy (in GRP terms), compared to 4.9% for regional Queensland.

Fraser Coast ranked 5th overall in the comparative importance of tourism across Queensland's regions but 10th in overall industry size; supplying just 1.8% of the state-wide contribution of tourism.

Tourism related industry profile

At the industry level, the tourism products that contributed the most to tourism consumption in Fraser Coast in 2013-14 were: (1) \$82m on long distance transport; (2) \$82m on takeaway and restaurant meals; and (3) \$65m on shopping.

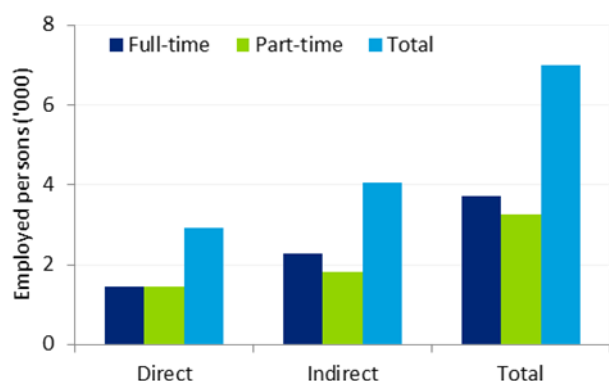

In terms of overall economic contribution, the tourism industries that generated the highest economic benefit to Fraser Coast in 2013-14 were:

- Accommodation with \$40 million in direct GVA and \$44 million in direct GRP;
- Other retail trade with \$30 million in direct GVA and \$32 million in direct GRP; and
- Cafes, restaurants, taverns and pubs with \$25 million in direct GVA and \$28 million in direct GRP.

Tourism employment

The TSAs define tourism employment as the number of tourism employed persons. In 2013-14 there were 2,920 persons (made up of 1,460 full-time and 1,460 part-time) directly employed in tourism in Fraser Coast.

Regional tourism profile

In 2013-14, visitors to Fraser Coast contributed a total of \$0.5 billion in tourism consumption to the Fraser Coast economy. The majority of visitor consumption in the region was contributed by domestic overnight visitors (\$0.4 billion). In relative terms, domestic overnight visitors to Fraser Coast spend the most per night (\$155) on average.

Table 1.2: Tourism activity summary

Visitor segment	Nights ('000)	Nights (%)	Consumption (\$ million)	Consumption (%)	\$ per night
Day-trippers	729	20	90	17	124
Domestic overnight	2,378	66	370	70	155
International	486	14	66	12	135

Methodology

Tourism and Events Queensland has worked with Deloitte Access Economics to produce consistent and comparable regional Tourism Satellite Account (TSA) estimates of the value of tourism to Queensland's regions.

Tourism Satellite Accounts are used to estimate the contribution of tourism to a region by combining the contributions of the various goods and services that make up the industry. The regional, state and national estimates are based on an internationally recognised and standardised framework (although regional TSA methodology has been extended to determine the indirect impact of cross region trade flows).

There are a number of steps required to calculate the tourism industry's contribution to Fraser Coast's economy. To start, a regional tourism consumption bundle is derived from TRA visitor survey data and adjusted to remove any price effects that are not directly attributed to the seller of the good or service (e.g. taxes, transport margins, pre-manufactured inputs etc.). The direct and indirect contributions of tourism are estimated by using regional input-output multiplier tables, derived from ABS data.

For consistency and assurance, the regional results are calibrated against the reported 2013-14 state TSA data.

Tourism Standard Reporting

For consistency in reporting, when referring to the overall size or contribution of the tourism industry in a region, the appropriate measure is GRP. GVA should be used when comparing the tourism industry against another industry within the same region.

Glossary

Direct contribution of tourism: The contribution generated by transactions between the visitor and producer for a good or service that involves a direct physical or economic relationship.

Indirect contribution of tourism: The subsequent flow-on effects created by the requirement for inputs from those industries supplying goods and services to visitors. For example, in the case of the hotel industry this might include the fresh produce supplied to a hotel and the electricity used.

Input-output table: An input-output table is a means of presenting a detailed analysis of the process of production and the associated use of goods and services and income generated. National input-output tables are produced annually by the Australian Bureau of Statistics.

Tourism gross regional product: Tourism GRP is tourism GVA plus net taxes on products that are attributable to the tourism industry. As such direct tourism GRP will generally have a higher value than direct tourism GVA. Direct tourism GRP is a satellite account construct to enable a direct comparison with the most widely recognised national accounting aggregate, gross domestic (or regional) product.

Tourism gross value added: Considered the most accurate measure of the contribution of the industry to the economy. It includes the total labour income and capital revenue received by the industry and the net taxes that government received from the production. This measure is directly comparable with the value added of 'conventional' industries such as mining and manufacturing and can also be used for comparisons across countries.

Tourism output: The total value of goods and services produced in Australia to satisfy visitor consumption. It is measured in basic prices, so it excludes net taxes on tourism products.
